BEE Star Label — Annual Compliance Report for FY 2025-26

The Standards & Labelling (S&L) Program of the Bureau of Energy Efficiency (BEE) is a flagship initiative aimed at promoting energy-efficient appliances in India through star labelling. To maintain the credibility and effectiveness of the program, it is essential to ensure that products available in the market consistently comply with the declared energy performance standards.
In this context, BEE has established a robust Monitoring, Verification, and Enforcement (MVE) framework, which includes:

- **Check Testing (CT):** Independent testing of random selected appliance samples in BEE empanelled-NABL accredited test laboratories to validate their energy performance against declared values.
- **Market Surveillance (MS):** Verification of labelled products available in the market to ensure correct display and authenticity of star labels.

Results at a Glance

Activity	Products Checked	Non-Compliant	Compliance Rate
Check Testing	1,455	2[1]	**99.8%**
Market Surveillance	1,116	2	**99.8%**

Types of Non-Compliances Identified

- **Check Testing:** energy performance or star rating not matching with declared values; or technical details not matching what was registered with BEE.
- **Market Surveillance:** mandatory star label missing on the appliance.

Action Taken

BEE has initiated enforcement action against non-compliant products identified through check testing and market surveillance, in line with its regulatory mandate — reinforcing consumer trust in the BEE Star Label.

For Consumers

For more details - Check for a valid BEE Star Label before buying an appliance. To learn more or verify a label, visit www.beestarlabel.com.
